

# ANTI GRAFFITI

ELEMENT Powder Coatings

## **ELEMENT Anti-Graffiti Powder coatings**

Antigraffiti properties  
Excellent resistance to solvents  
Hard and scratch-resistant surface  
Excellent resistance to weather  
Excellent hiding power  
No VOC

# ANTI GRAFFITI

## ELEMENT Powder Coatings

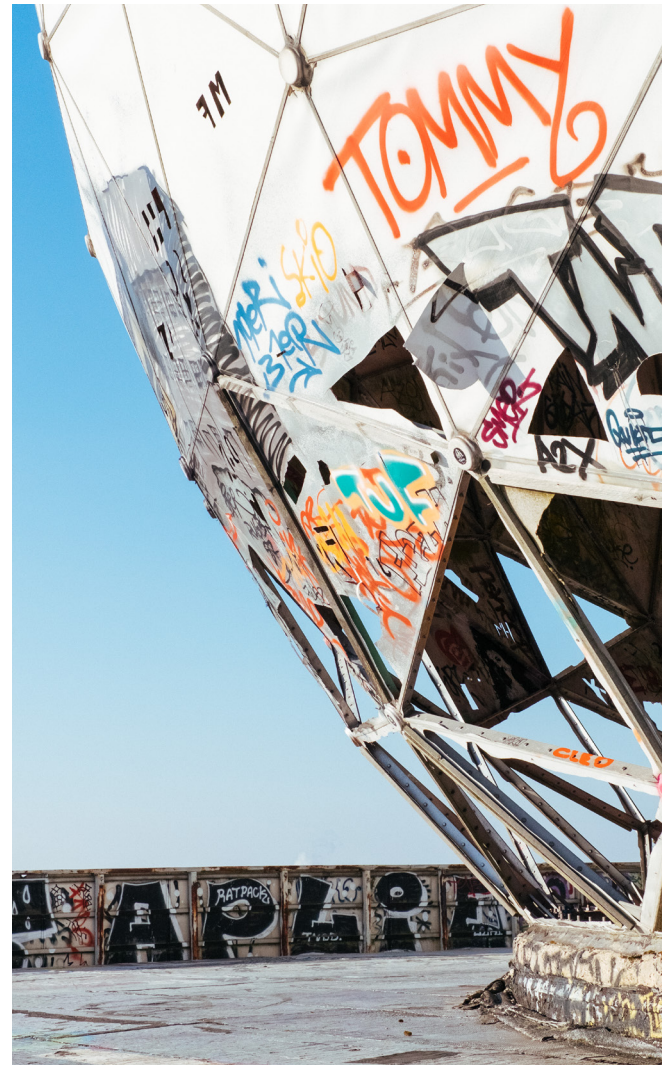

### **ELEMENT PUR61 series are weather resistant powder coating systems offering permanent graffiti protection**

ELM PUR61 series are formulated with special polyurethane resins and hardener. It creates a hard and scratch proof surface that stands up to the toughest demands on weather resistance and graffiti protection.

Thanks to its high chemical resistance, graffiti can be easily cleaned from the surface with the aid of solvents and does not damage the powder coating. The surfaces remain clean as the first day.

### **Product range**

- Polyurethane based powder coating
- RAL, NCS ve Pantone shades
- Pearl mica shades (metallic)
- Special shades on request

### **Powder coating specifications**

- |                         |                              |
|-------------------------|------------------------------|
| - Particle size         | < 300 µm                     |
| - Average particle size | 30-60 µm                     |
| - Solid content         | > 99%                        |
| - Density               | 1,65-1,75 gr/cm <sup>3</sup> |
| - Storage stability     | >24 months                   |
| - Curing schedule       | 200 °C 15'                   |

### **Application**

- Public transport stations
- All kinds of city furniture (exterior)
- Telephone box
- Public facade elements, window profiles
- Billboards
- Noise protection walls
